Product CRUD using JSF3, with migration to PrimeFaces based on JSF3.

Description:

Creation of a Product CRUD application using JSF3. Later, it was migrated to PrimeFaces based on JSF3. The entire application was built using Jakarta EE 9.

Role:

- Analysis of the legacy system.
- Development of an MVC architecture with emphasis on a service layer, similar to modern application architectures.
- Use of repository-style classes and internationalization implemented in UI components instead of the data layer.
- Integration of the front-end using JSF3 and PrimeFaces.

Technologies:

- Jakarta EE 9
- JSF3
- PrimeFaces
- PostgreSQL
- Git
- GitHub

Result:

- The application was revamped from JSF3 to PrimeFaces, improving maintainability by approximately 40%.
- Increased scalability, resulting in reduced maintenance costs.
